

Practical, hands-on tools to execute and succeed in project management.

Certificate of Project Management

For Construction

The on-schedule delivery of a construction project depends on effective project management. Gain a strategic understanding of the business of construction and tactical skills to manage issues that come with each project phase.

Who should take this course?

This program is designed for anyone who plays a role in moving a construction project from start to finish, including, but not limited to: business owners, project managers, project planners, estimators, superintendents, and construction managers.

Why attend?

In Davenport University's Certificate of Project Management - For Construction you will learn to manage a cohesive project strategy commercially, contractually and technically. Gain skills and knowledge to ensure you make money and still get the project built on time and on budget.

2-day Certificate - \$895 (includes materials)
November 3 & November 10, 2021; 9am - 5pm
Davenport University Lansing Campus

Topics Include:

- Fundamentals of project development
- Estimating and bidding process
- Project objectives and goals
- Understanding contracts and the legal framework around construction
- Establishing project schedules
- Negotiating labor needs
- Managing people, from stakeholders to employees and subcontractors
